---

# UNLIMITED INSPIRATION

---

ImageTek™ digital ceramic inks introduce a new realm of possibilities for ceramic glass printing. Scientifically developed with expert processes, these unique inks are fused into the glass during toughening to ensure lasting vibrancy and photorealistic colour, enabling higher degrees of quality, design and functional performance.

INTERIORI™ design collection is the result of a sophisticated mixture of ceramic inks, innovative digital printing technology for glass and unique graphic design techniques.

The flexibility of printing INTERIORI™ designs into any kind of glass application using new design elements and mimicking natural materials is redefining the possibilities for surface design. The designs are innovative and unique, but at the same time they fit varied surroundings and are easy to choose and enjoy.

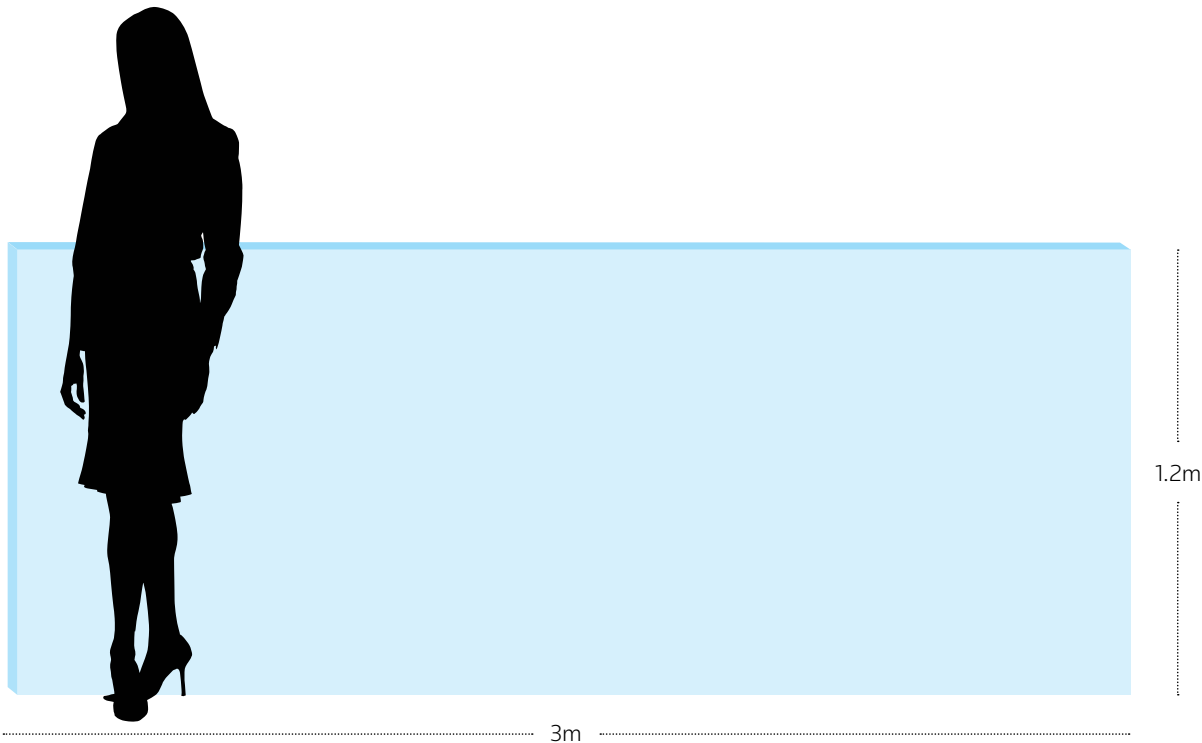

---

# VERSATILITY IN EVERY DIMENSION

---

The advantages of digital printing are clear. Digitisation and the size of our printer makes it possible to print any image, in any size, however large. The printed image can be spread across many panels, to achieve any surface size and proportion. Printed glass panels can also be incorporated into laminated glass and IGU's.

This collection includes 50 designs tested for both print and design on various surfaces. They are available in sizes up to 1.2m x 3m
