

The Lacobel® T range is a high opacity coloured glass suitable for internal wall cladding and spandrel applications. For faster delivery lead times, Lacobel® T is a pre-painted stock sheet item which is cut, edged and processed similar to ordinary toughened or heat strengthened glass depending on the application. Lacobel® T uses a high quality durable ceramic based industrial paint that is hard to scratch. The tempering process fuses the paint onto the surface of the glass. It cannot be supplied in an annealed form. Available in 6mm thickness, 3210mm x 2550mm in Cool White, Deep Black and Anthracite Grey.

For cladding, paint side of glass is fixed directly to the wall. We do not recommend 'two way' viewing or any sort of 'backlighting' due to possible pin holing or surface imperfections. For more information refer to ImageTek™ Design & Glazing Notes document. IGU's and tempered laminated glass applications are possible with paint surface to position #4.
